

FIELD CONSTRUCTED TANKS

Altus provides clients with extensive expertise in the design, engineering, construction and site safety of API welded steel terminal storage tanks and tanks supporting the SAGD facilities in and around the Alberta oil sands. With design capabilities to support tanks up to 500,000BBL in size, 400 employees and over 25 years of experience, we have the knowledge and resources to handle everything from single tank projects to large multitank operations.

Our ability to design and deliver everything from atmospheric tanks conforming to API-12F, API 650, or API 620 and tailor our products to meet the needs of any situation has made us a leader in the energy sector. We have completed hundreds of projects with contract values up to \$100M and consistently deliver exceptional results on time and on budget.

To provide the best value to our customers, we maintain a direct relationship with steel mills to ensure our prices are competitive. We continue to invest in the latest technologies to capitalize on all possible improvements in efficiency. This, combined with our vertically integrated model, which allows for better execution and project schedules, enables us to lead the industry in quality and cost efficiency.

Tank options:

- 3500-500,000BBL tanks
- Internal and External Floating Roofs
- Rafter Supported Roofs
- Aluminum Dome Roofs
- Internal Sampling Systems
- Custom Design to Meet Client Needs
